Welcome

The Trial Gardens at Costa Farms in Miami, FL (Zone 10) provide an opportunity to evaluate plant performance during two different growing seasons. The gardens were first constructed in 2008 on half an acre of land and within the first year were expanded to a full acre. In 2011, we added one additional acre of space that is going to add to the overall breadth of our program and offer an exciting and diverse array of evaluation options.

The gardens are the public division of the department of Research and Development. If you are interested in learning more about the garden please e-mail Dr. Kate Santos at ksantos@costafarms.com.

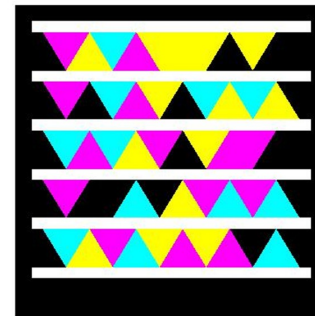

Smart Tags

Want to access more information about the varieties in the gardens this year? Featured on labels in the partner beds are smart tags. These tags can be snapped via your smart-phone and instantly take you to our revamped website, which now allows you to view pictures and data of each variety, make comments and rate your favorites. And with Microsoft's Tag App, you can maximize utilization of our website right from the gardens.

The Tag app works on Windows Phone 7 and 7.5, Windows Mobile, iPhone, Android, BlackBerry, Symbian and J2ME phones.

To get the reader, type in <http://gettag.mobi> on your phone's web browser or find it in your mobile marketplace.

Try it out now and
head to R&D's
Home Page!

Performance

Evaluations are intended to simulate what the consumer would observe after purchasing and planting the product in his/her own garden. Plant material is evaluated every two weeks in the trial garden by the Research and Development team. In addition to photography, the following information is recorded during each data collection interval:

Plant Width: Measured in inches

Plant Height: Measured in inches

Stage of Flowering:

- (1) No Flower
- (2) Cracking Color
- (3) Canopy 10-50% in bloom
- (4) Full Color
- (5) Past Full Color

Overall Performance:

- Scale of 1(Poor) to 5 (Optimal)
- Takes into account factors such as:
 1. Plant Health: Disease, Nutritional or Insect Susceptibilities
 2. Plant Symmetry
 3. Plant Vigor

Environment

Average	71 °F
Day	76 °F
Night	67 °F
Min	31 °F
Max	93 °F
Humidity	81 %
Total Rainfall	2 inches
PAR	37 mol/day

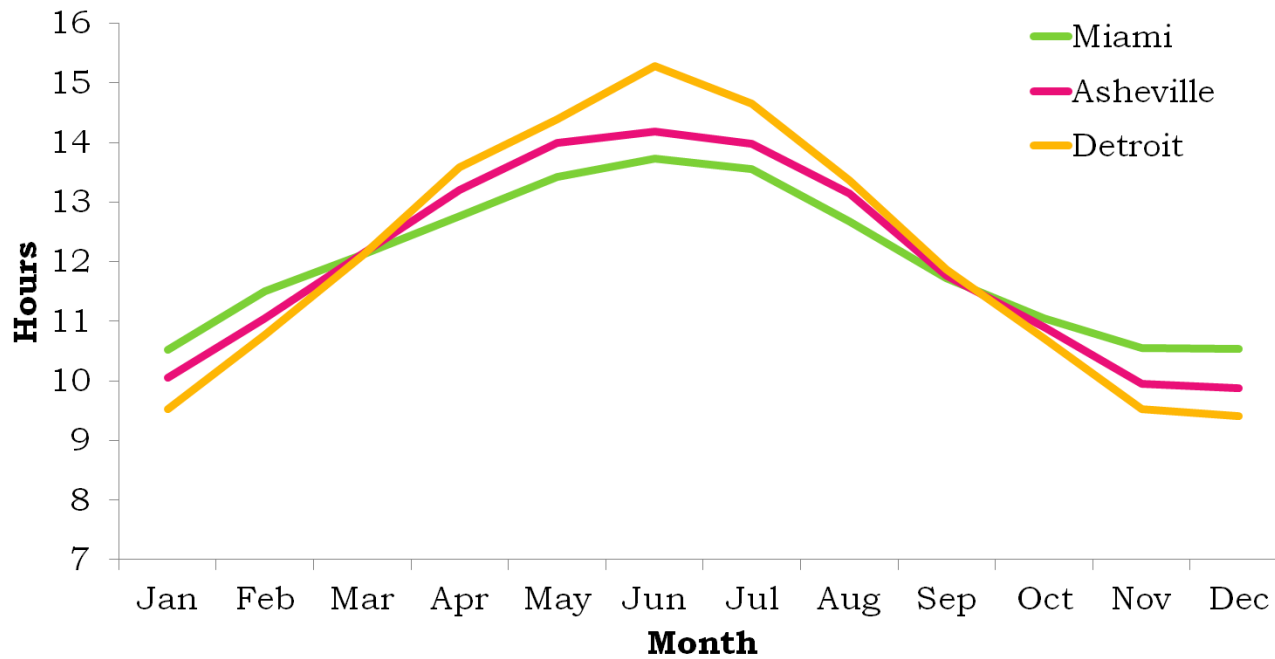

** From November 7, 2011 —January 9, 2012*

Frost Protection

When temperatures threaten to drop close to freezing, the landscape beds are covered with frost blankets and/or the overhead sprinklers are run. The row beds are covered with hoops and plastic.

These measures help protect the majority of the plant material in the garden. Extremely cold-sensitive varieties can show some signs of cold damage, as was observed in many of the coleus and New Guinea impatien varieties after a 31F drop January 3.

Average Day Length

New 2012 *Blind Comparison Trials*

We installed 40 additional row beds and four hanging basket frames that will serve as our onsite blind comparison trial fields. The objective of this area is to evaluate genera side-by-side based on form and color, across breeders, series and starter form (seed, vegetative cutting, etc.) to ensure that the ultimate selections are based solely on the merit of plant performance throughout the trial. Each variety is identified with a numeric code to ensure that any preexisting bias to a particular series, breeder, or form is removed during performance evaluations and selections. The two genera selected for the blind comparison trials this season are petunias (row beds) and calibrachoas (baskets).

Designer Combinations

The Goal:

Develop a premium combination that is eye-catching and unique.

The Challenge:

- Breakaway from the three component petunia, calibrachoa and verbena combinations and...
- Design combinations that:
 - Have 4-5 components
 - Mix seed and vegetative
 - Mix foliage with color

New 2012 Vertical Gardening

We are trialing the Woolly Pocket vertical gardening system. Vertical gardens are organized systems of plants that grow vertically up walls, fences and other vertical surfaces. They are a great way to show off plants, cover unsightly walls, create privacy in courtyards and increase air quality in any space. Woolly Pockets are lightweight, flexible, breathable, modular gardening containers. The pockets can be used indoors and outdoors, on horizontal surfaces and vertical surfaces, and they have built-in moisture barriers to protect walls, floors and furniture.

Concept Gardens

Gardens are different for everyone, from those that meander through loosely organized beds under a canopy of sun or shade, to the structure and function of a formal garden, to gardening in a myriad of containers on balconies, decks, or patios. Wherever and whatever the home gardener defines as their garden, our goal is to ensure they will be successful with it. Gardening success is in part defined by selecting strong genetics and also in part by understanding the destination the plants will be grown in. Our new concept gardens enable us to trial plants in different simulated destinations to help us define what plants will work best in what areas.

New 2012 Retail Trials

A gateway to any garden is the garden center. Appeal, function, and/or familiarity are all drivers in consumer plant selection, but ultimately how the plant looks on the shelf is one of the most important factors that affect whether or not the plant is sold. Few large scale trials are conducted to evaluate how well different genetics hold up under tight spacing, irregular watering cycles and frequent handling – yet all criterion are important to consider and evaluate when selecting new genetics. As part of our expanded program, we will now include a simulated retail trial evaluation component with the same genetics as are in the garden, but grown in breeder-defined retail containers. These genetics were moved out to the retail area the second week of January and evaluated over a period of two weeks for longevity and performance.

Closed Trials

2013

The first phase of our closed garden evaluation beds was installed this year. The objective of this area is to serve as a continuation to our closed production trial program, by offering a testing site for breeders who wish to evaluate garden performance for pre-released genetics.

The design incorporates fixed with living walls around the perimeter and interior, to enable air to flow within each zone. To allow time for the living walls to grow in, closed plant trials will not commence until 2013. This space is currently being used for public trials, which visitors are welcome to explore.
